ISA Competences (Research Areas)

ISA Competences (Cross-Areas)

Transferable Results

REM

- REquirement Management tool used to guide the requirement elicitation and help the creation of a formal requirement documentation.

FAMA

- Framework for the automated analyses of feature models integrating some of the most commonly used logic representations and solvers proposed in the literature.

FAST

- Framework for automated service trading (Deployed as a JBI-compliant component, JdA).

PPIM

CRIS

FOM / M

STATSevices

ADA

MACMAS

- Statistical Analysis tool suite that comprises of: a web portal, a set of web services, plugins for Excel 2007 and 2011

- Tool for explaining the inconsistencies of SLA documents specified with WS-Agreement.

- Tool for supporting the MaCMAS models and transformations.

Software product lines

Why a new software
production paradigm?

Software product lines

Communicate

Reproduce

Produce

Software product lines

A new software
production paradigm

Software product lines

Industrial Trends

Organizations
are evolving

- *Project* Centric Software Engineering
- *Product* Centric Software Engineering

Software
variability
constantly
increasing:

- Variability goes from hardware to software
- Variations points grows by thousands

Assets' *Reuse* is
shifting

- from ad-hoc to ***systematic***

Software product lines

No customization
-
one product

Production

acing efficiently a large amount of
standardized products

Software product lines

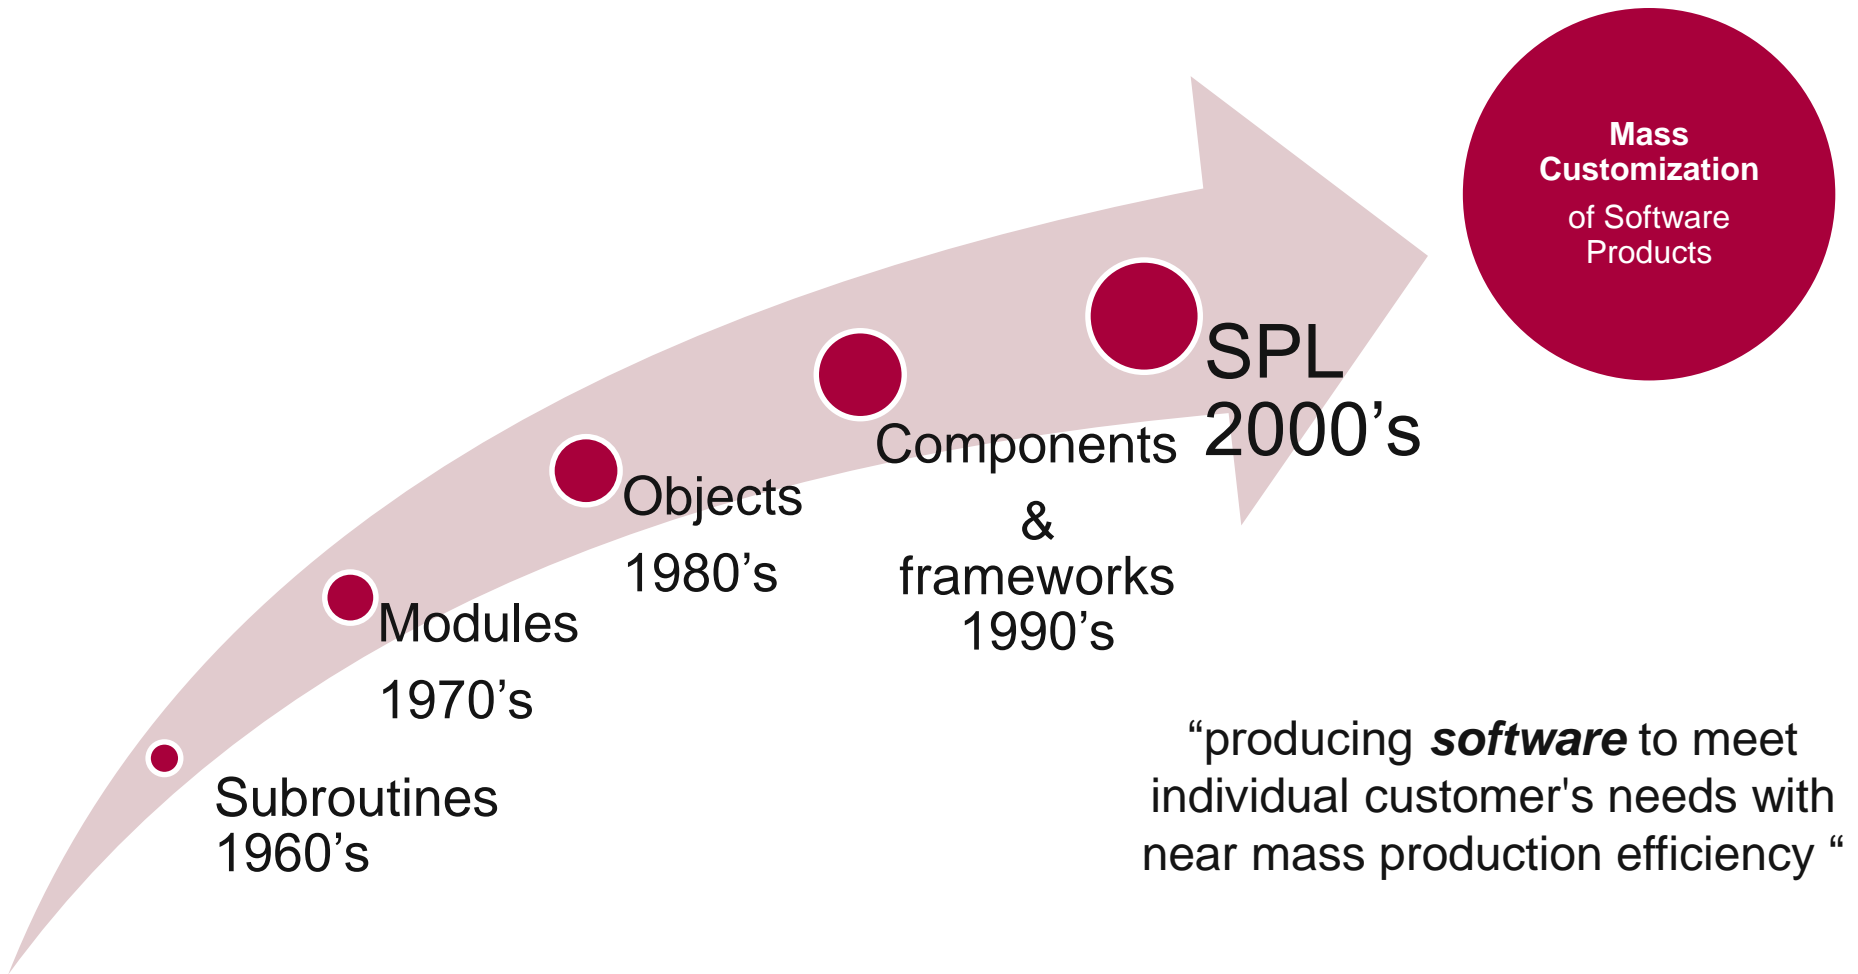

Mass customization

“producing goods and services to meet individual customer's needs with near mass production efficiency “

[Tseng, M.M., Jiao, J. (2001)]

Software product lines

Software product lines

Traditional Approach (*mass production*)

Product 1

Product 2

Product 3

Product 4

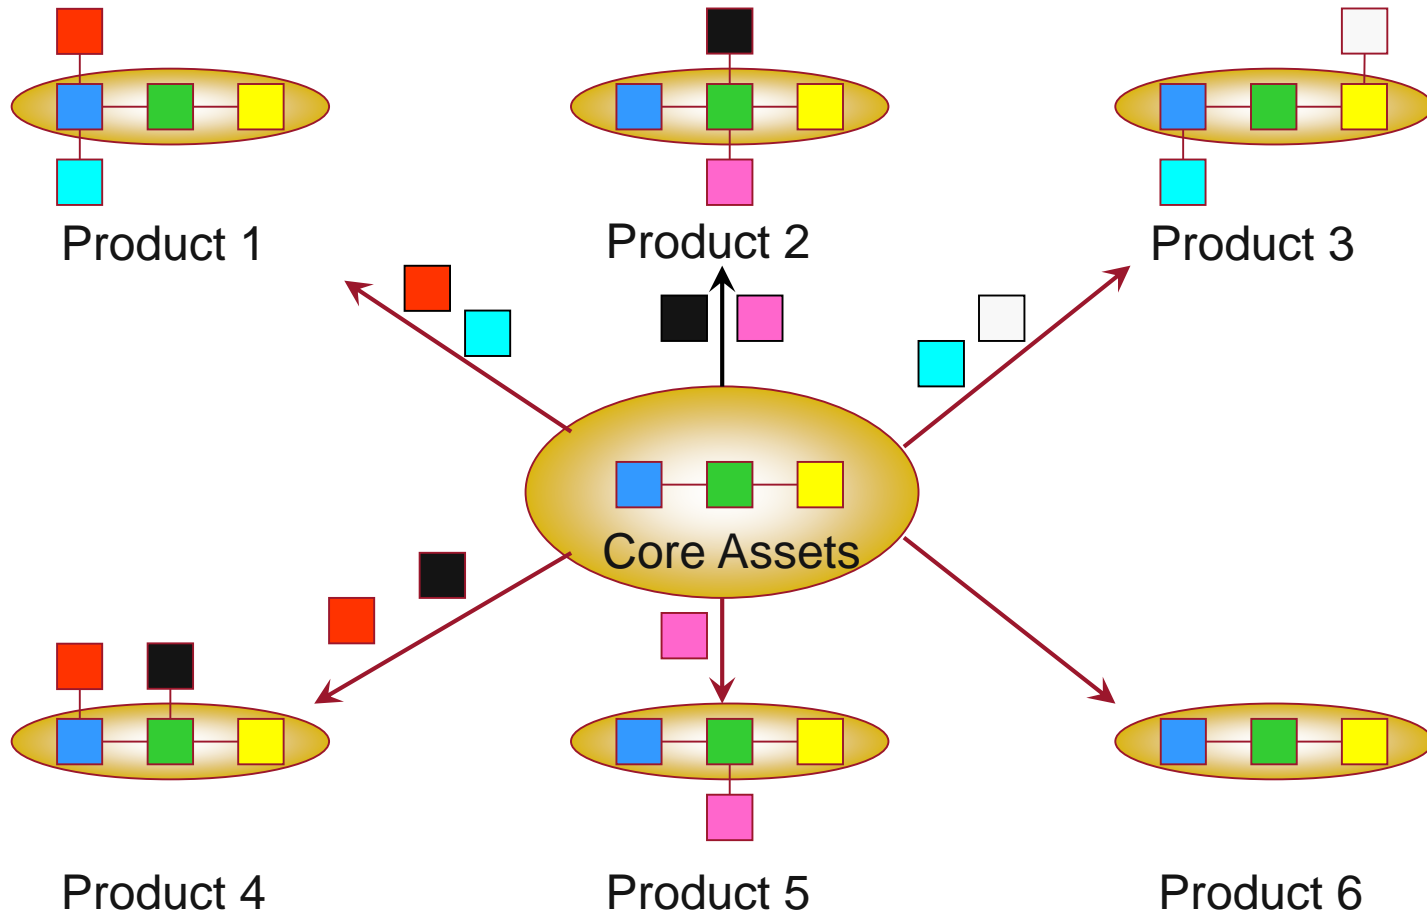

Product 5

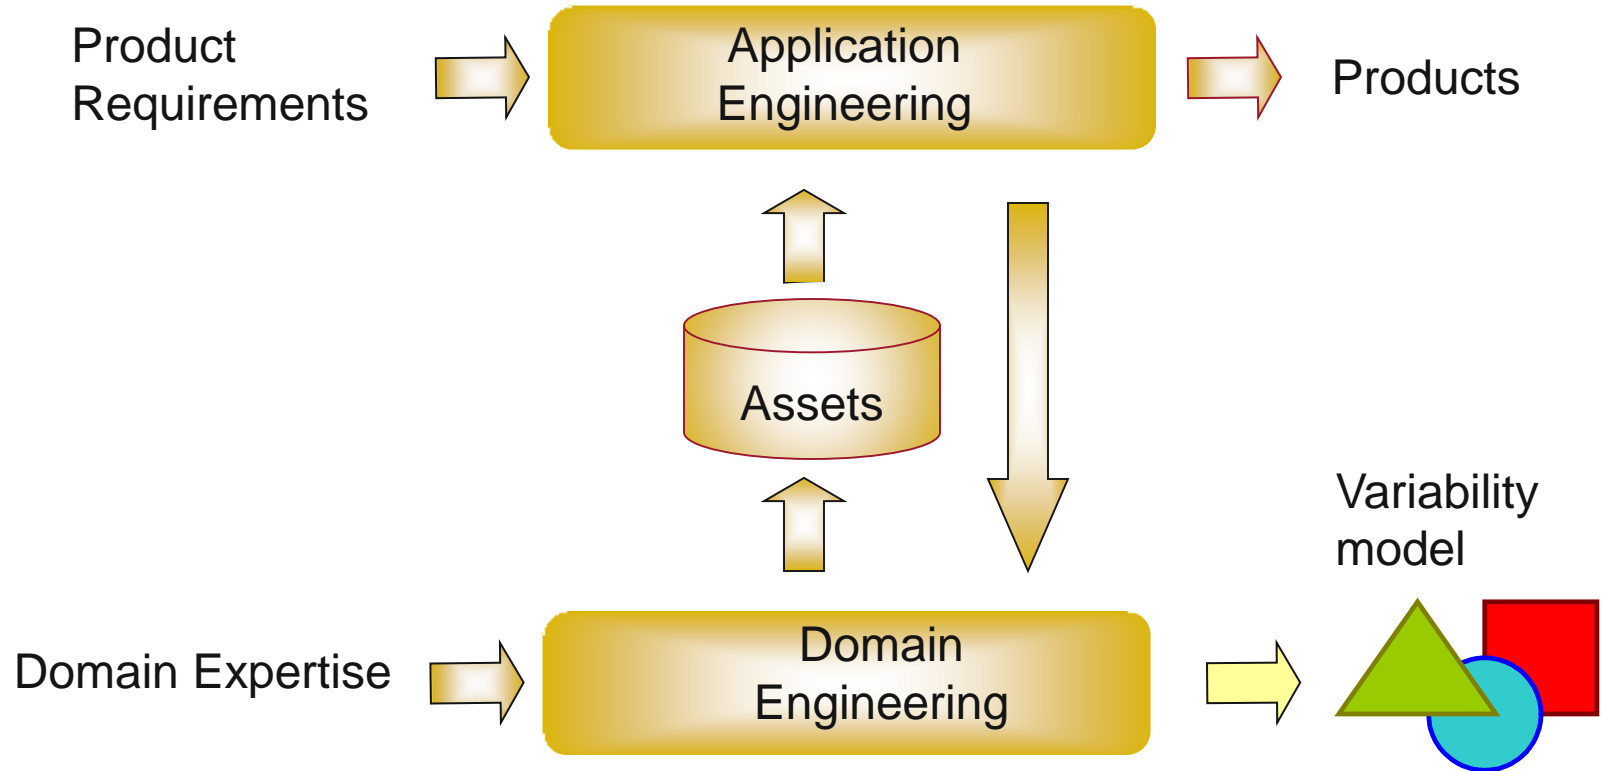

Product 6

Software product lines

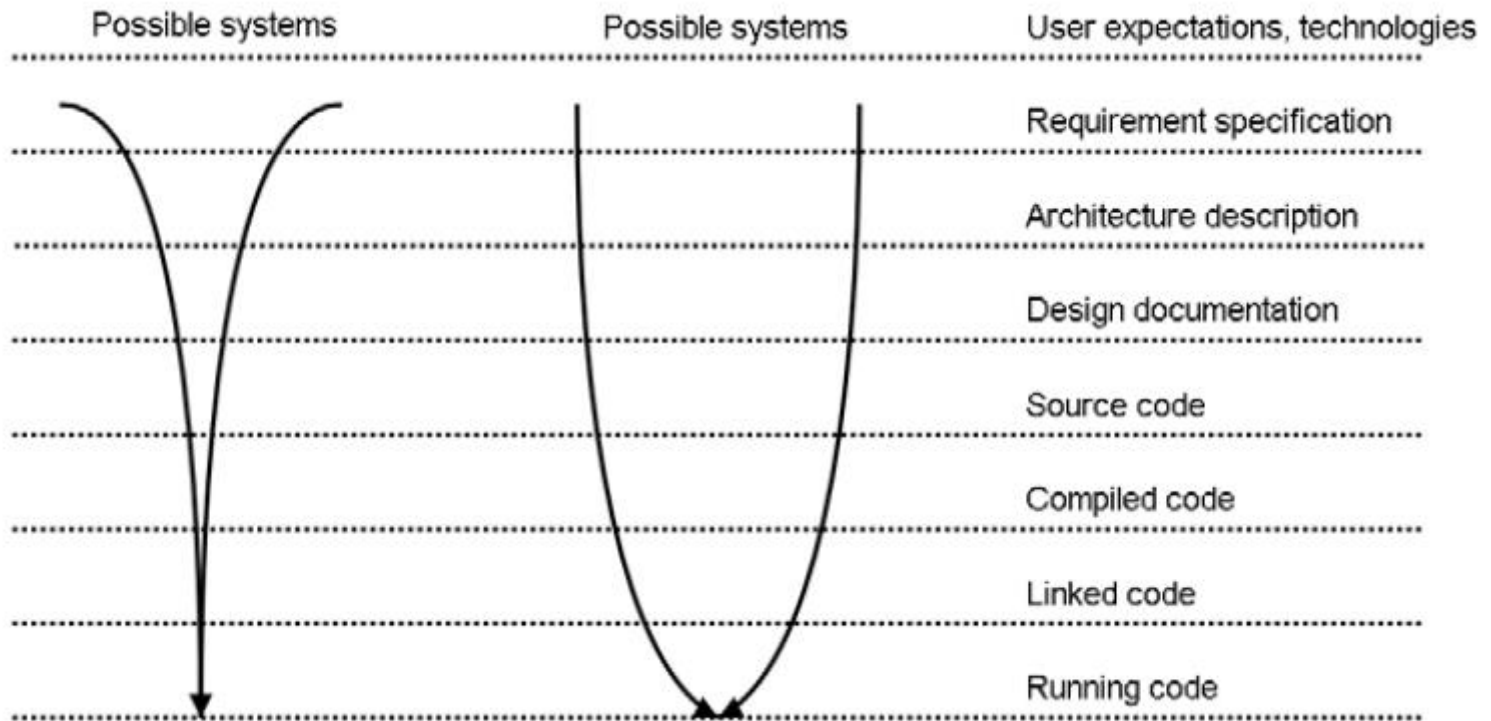

Product Lines Approach (*mass customization*)

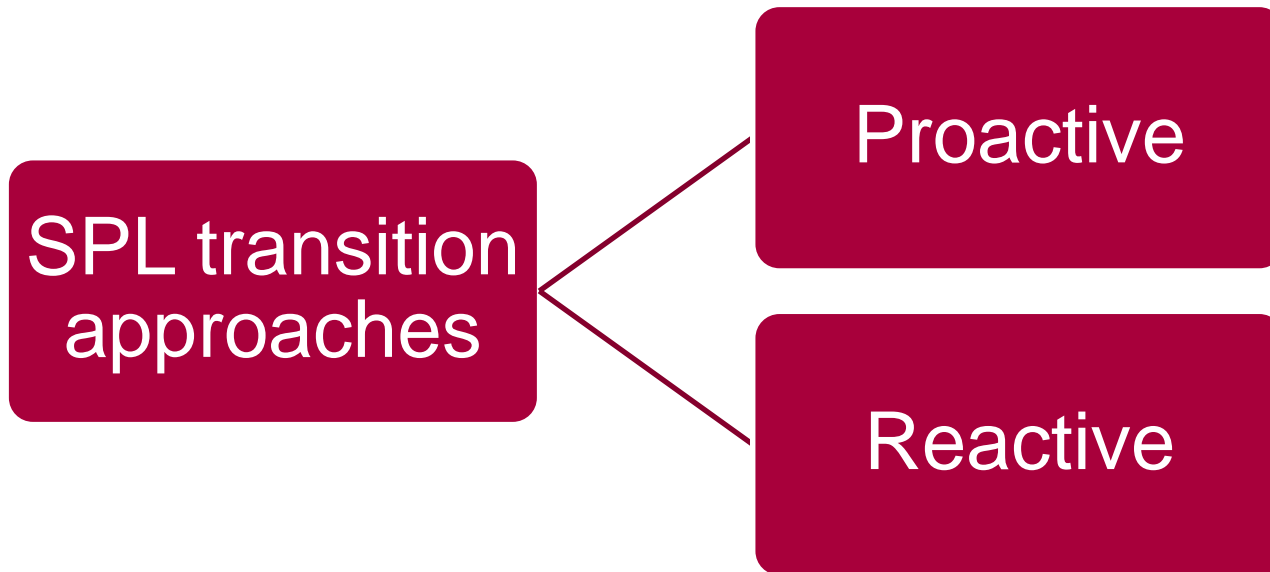

SPL: Activities

SPL metaphors

Svahnberg M., van Gurp J., Bosch J., *On the Notion of Variability in Software Product Lines*. Proceedings of IEEE/IFIP Conference on Software Architectures, 2001.

Introduction

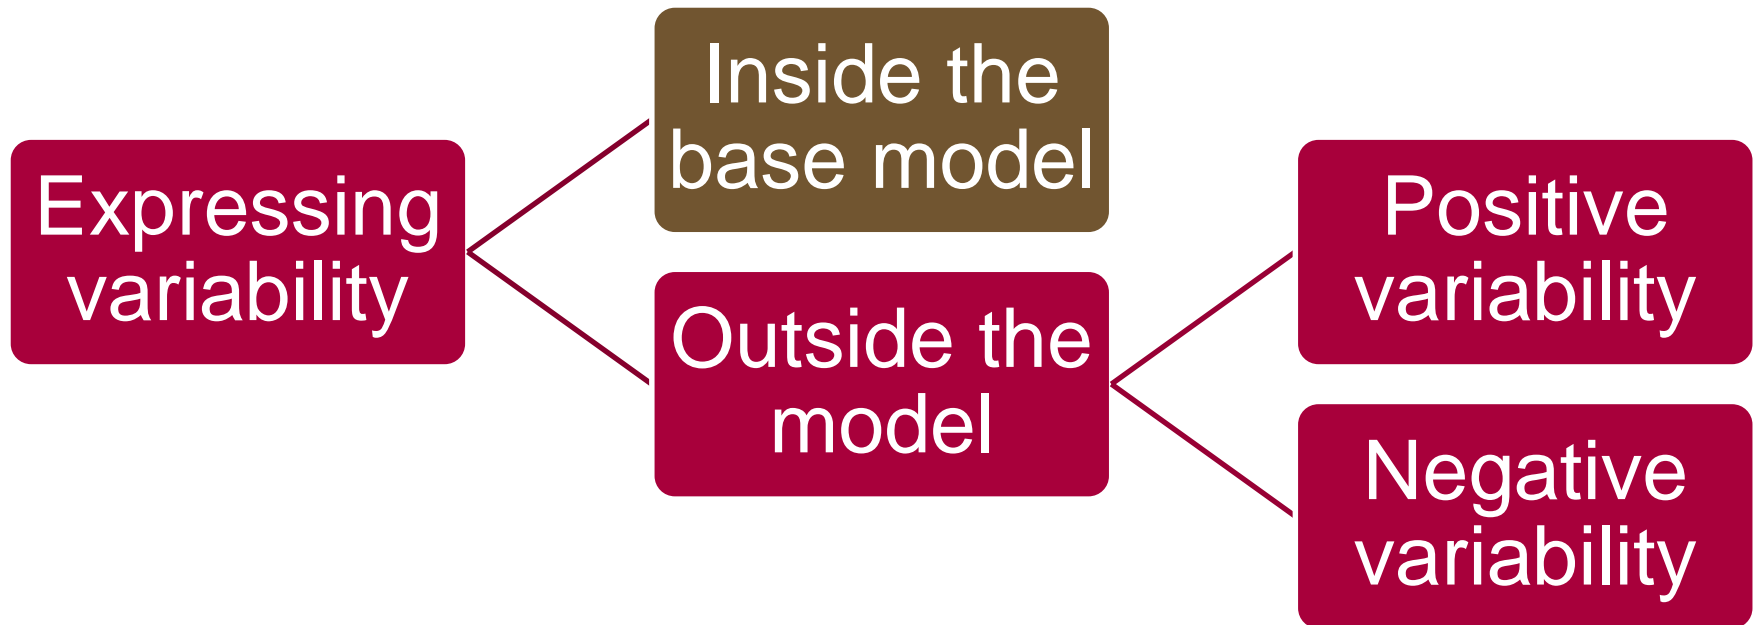

Software Product Lines

Variability modelling

How to model variability

Inside the model

Figure 5: Example of an alternative relationship

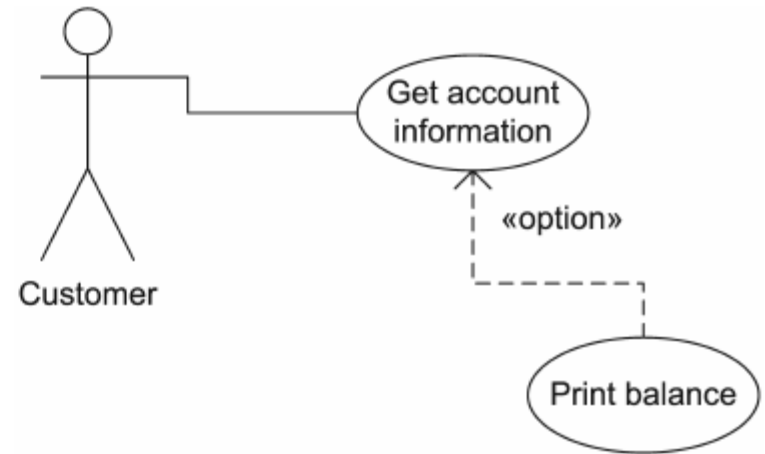

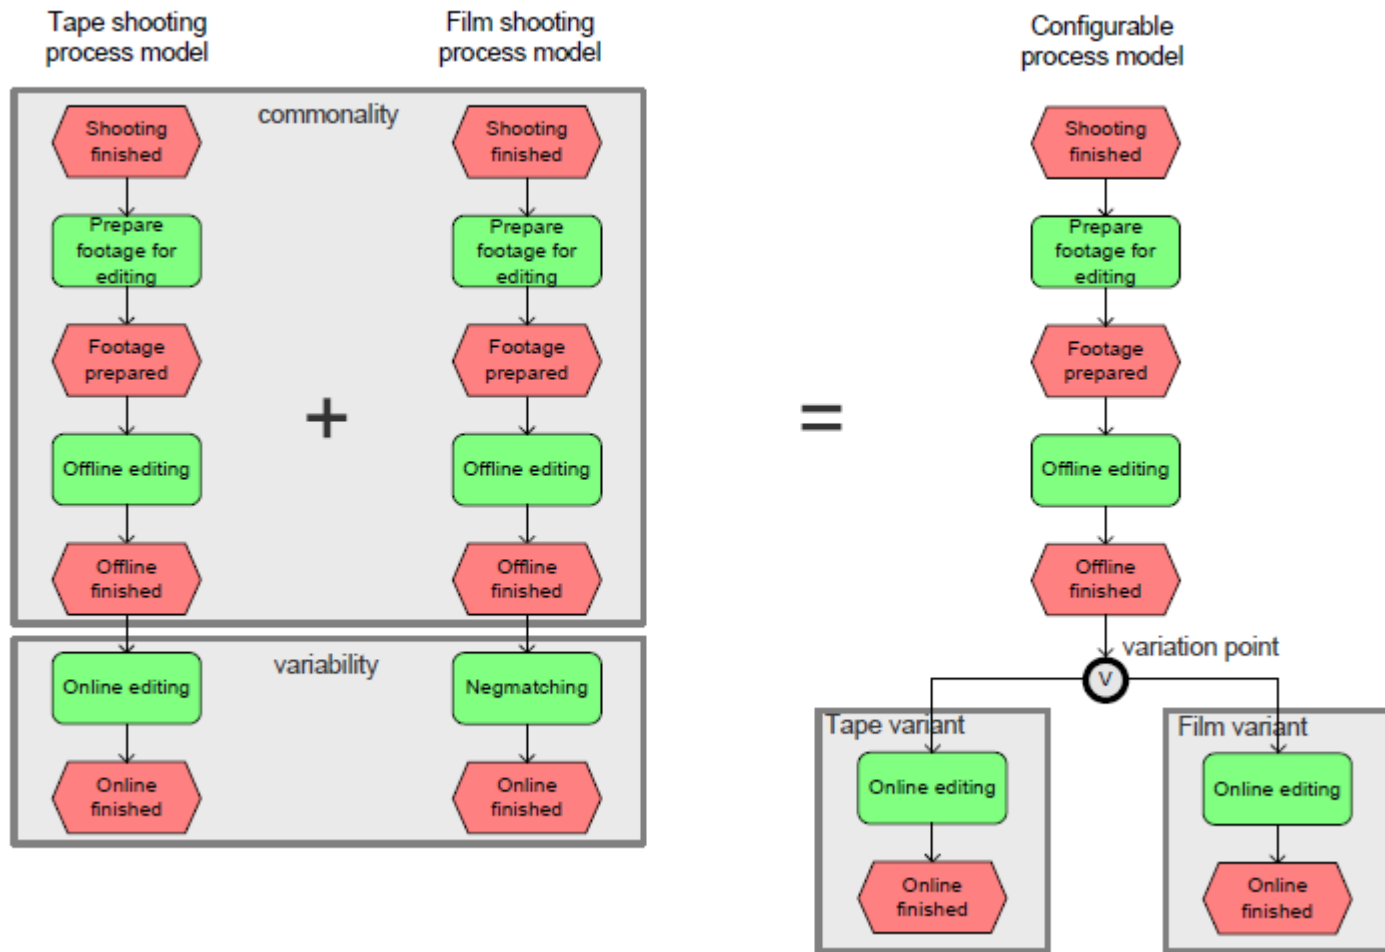

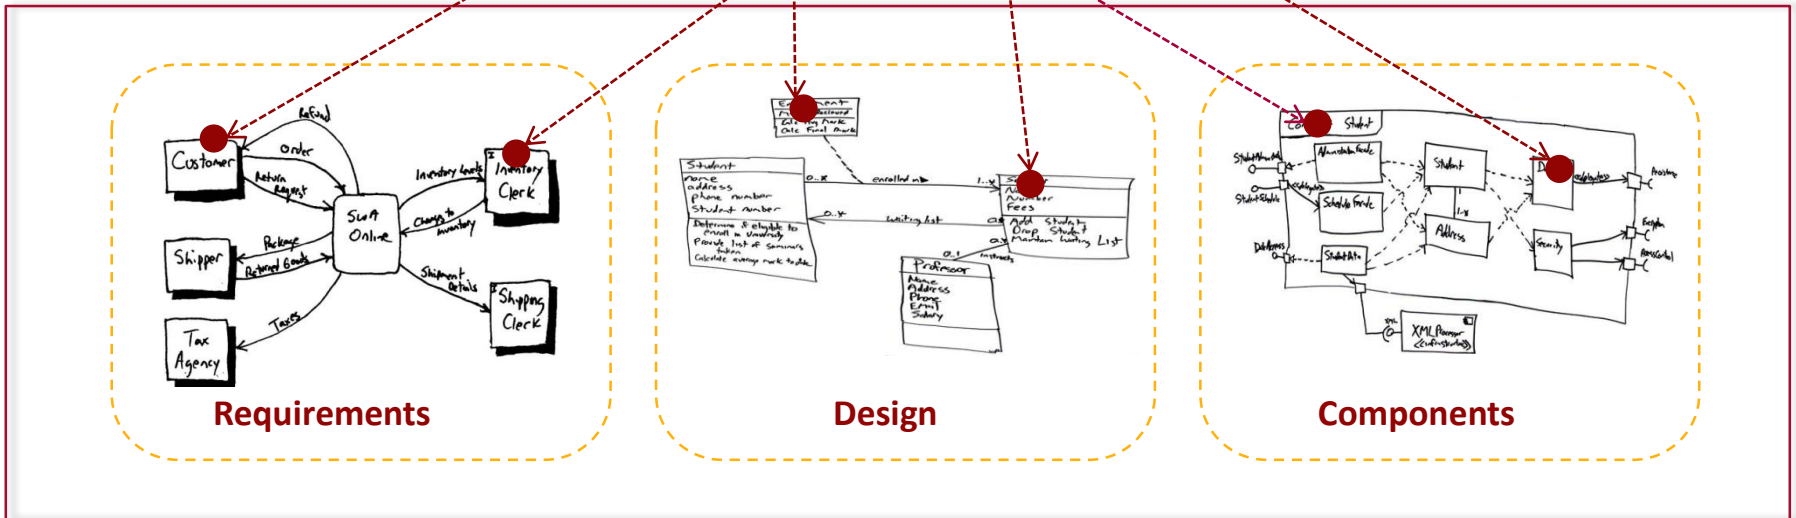

Figure 6: Example of an optional relationship

Inside the model

Outside the model

Variability Model

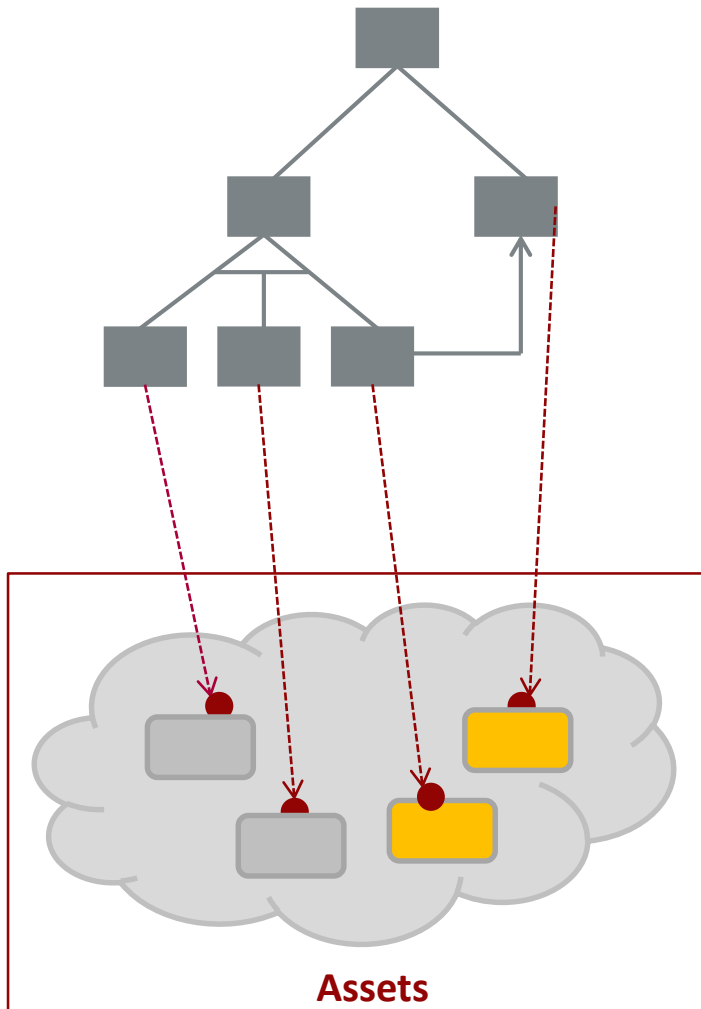

Requirements

Design

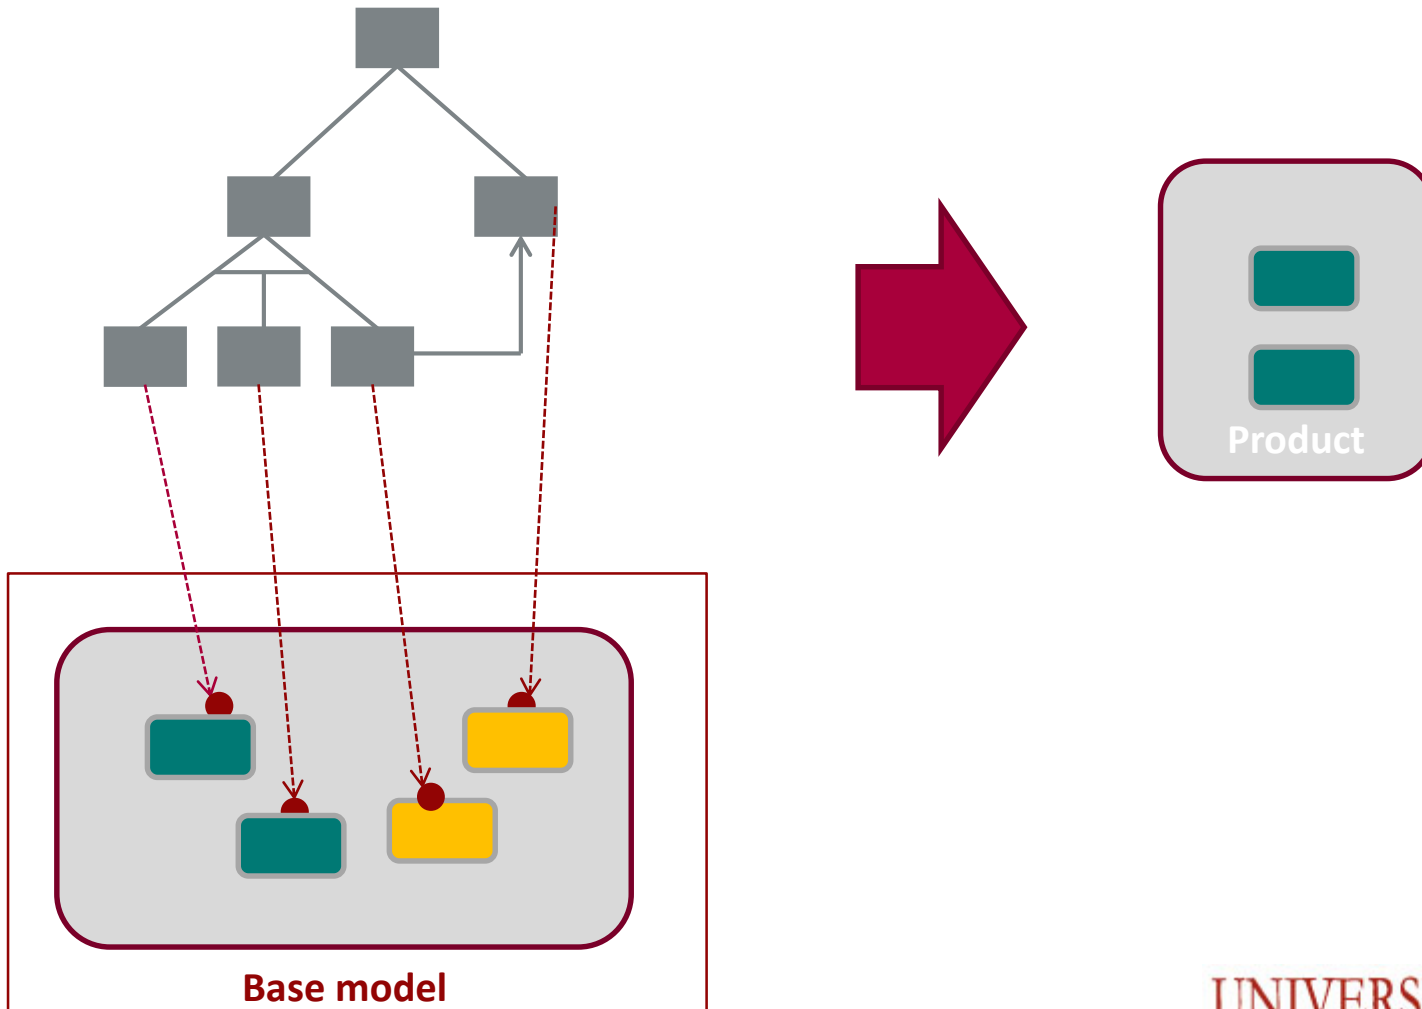

Components

Base models

Positive variability

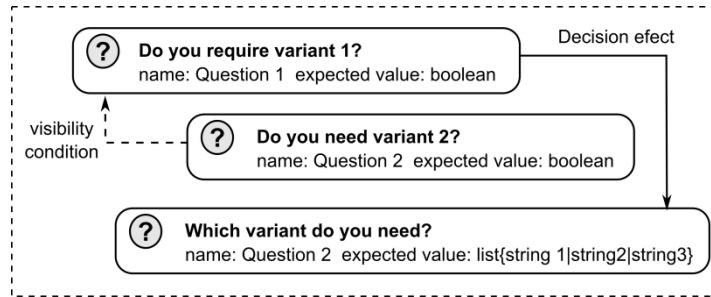

Negative variability

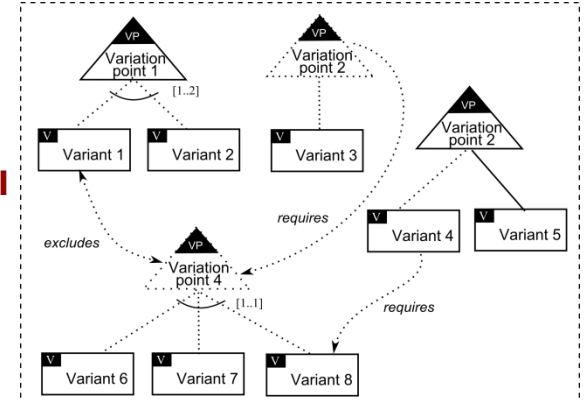

How to model variability

Feature modelling

Decision modelling

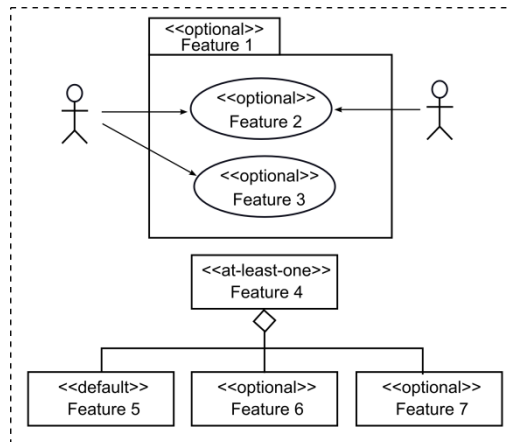

Orthogonal variability modelling

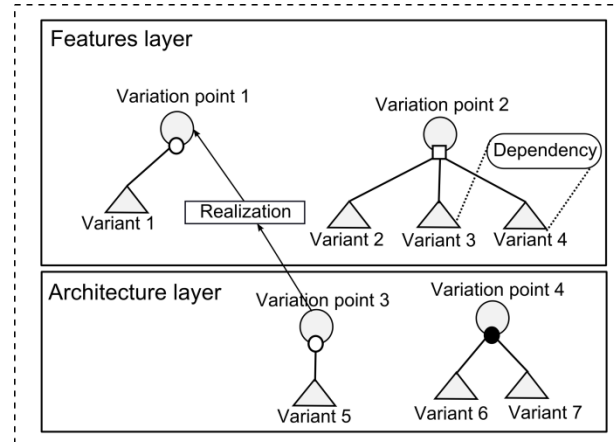

Ad-hoc solutions:
tables, textual
docs, ...

UML-based

COVAMOF

Feature models

How to specify a particular product?

FEATURE

“An important part of something”

“A prominent or distinctive characteristic of a software system”

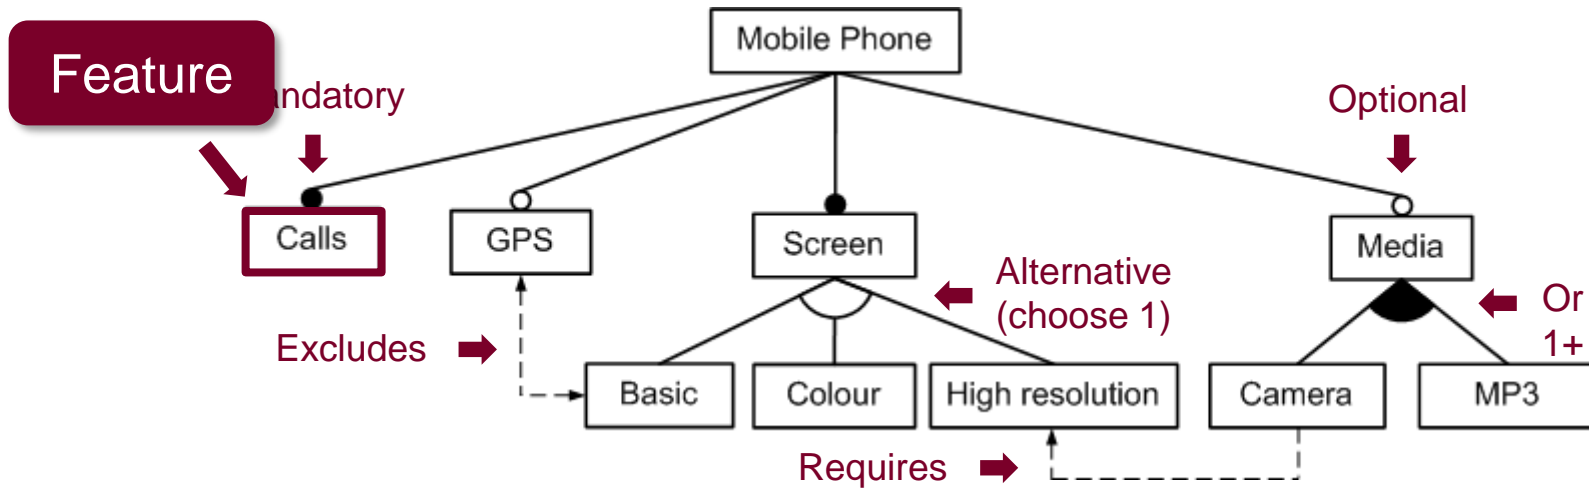

Feature models

How to specify an SPL?

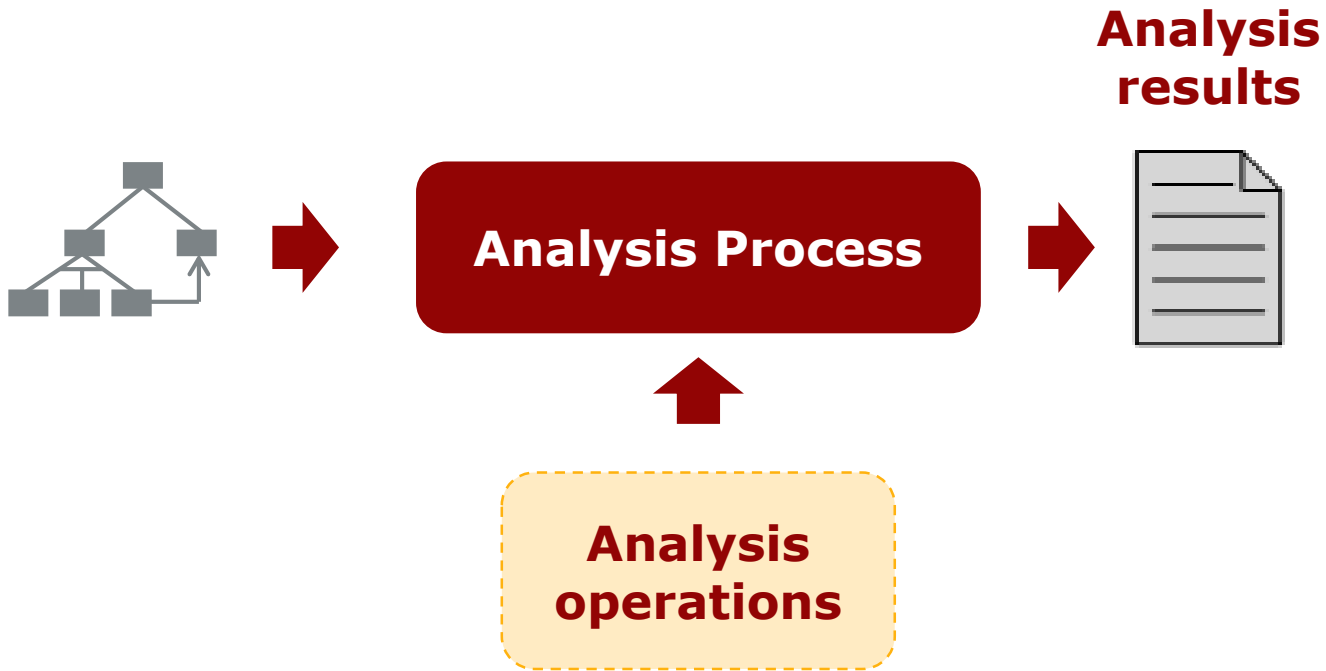

“Feature Model: A hierarchically arranged set of features to represent all possible products of an SPL”

Feature models

Automated Analysis

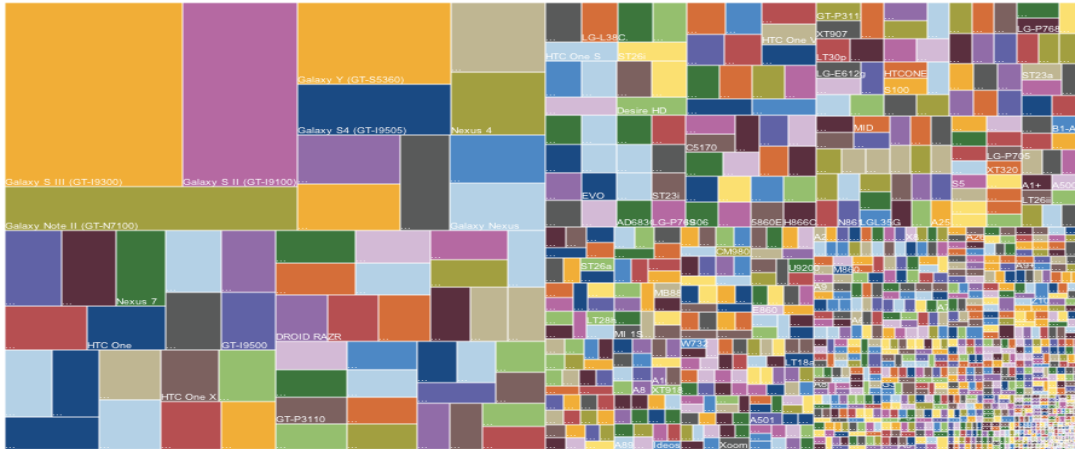

Software product lines

And how can this help in real scenarios?

Real cases

What configurations should I test to defend my users from bugs?

Conclusions

SPL is a *new* software production paradigm

SPL affects all levels of abstraction

Variability management is essential

Software product lines

Gestión de la variabilidad y líneas de producto

Ingeniería de Software para un mercado *soft*
